**AI Engineer | Agent Infrastructure and Applied AI.** AI Engineer at HPE building production agent infrastructure, evaluation systems and LLM inference serving for enterprise storage. Background in distributed systems and cloud engineering, taking AI systems from prototype to production across teams.

## Experience

**Hewlett Packard Enterprise, Storage AI Team** — San Jose, US
*AI Engineer* — *Feb 2026 – Present*

- Architected the multi-agent LLM harness every team agent runs on, with an MCP tool server, guardrails and tracing; it serves **6,300+ tool calls a week** across HPE Storage.
- Built the memory layer for persistent agents: embeddings, vector search and a context graph linking **13,005** past bugs and **5,600** analyses by component, symptom and fix.
- Tuned vLLM serving of Qwen 27B and 35B for agent workloads: prompt-prefix caching, KV-cache reuse across steps and prefill/decode-aware request handling.
- Built the agent evaluation platform in four weeks (**three production deployments**): rubric scoring against expert feedback, LLM-as-a-judge and tracing, now the release gate.
- Shipped alert-triage and root-cause-analysis (RCA) agents to production, with eval-guided feedback loops that re-test prompt and memory fixes against the pass bar.

**Hewlett Packard Enterprise, Storage** — San Jose, US
*Cloud Software Engineer* — *Jun 2023 – Feb 2026*

- Built cross-stack observability for a platform serving **10,000+ customers**, cutting typical issue resolution from **30 to 3 minutes**; failure-trend analysis raised first-time success from **55% to 85%**.
- Implemented six enterprise data-migration features in Go across four storage array generations, over Fibre Channel and iSCSI.
- Built a documentation agent that updates docs on every pull request, saving about **5 engineer-hours a week** per team.

**The Luminosity Lab, Arizona State University** — Tempe, US
*Research Aide* — *Feb 2022 – May 2023*

- Led the iOS team on the TouchPoint apps; a telehealth flow saved doctors about 15 minutes per visit.

**Aruba, Hewlett Packard Enterprise** — Tempe, US
*Software Engineering Intern* — *May 2022 – Aug 2022*

- Built a test-automation tool that configures network topologies, saving an estimated 150k engineering hours a year.

**Webex by Cisco** — Bengaluru, India
*Technical Undergraduate Intern* — *Jan 2021 – Jul 2021*

- Built call and meeting scheduling APIs for the Webex iOS SDK v3 and the Kitchen Sink sample app.

## Skills

• **AI and agent systems**: LLM agents, multi-agent orchestration, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), embeddings and vector search, evaluations and LLM-as-a-judge, guardrails, memory, LangGraph; serving with vLLM, Qwen, llama.cpp

• **Backend and languages**: Python, Go, TypeScript, FastAPI, gRPC, SQL

• **Infrastructure and data**: Kubernetes, Docker, AWS, Spark, Kafka, PostgreSQL, pgvector, Prometheus, Grafana; product work in React, Next.js, SwiftUI

## Selected Projects

• **Zuo, personal agent infrastructure (2026)**: Job queue, budgets and agent teams dispatched from my phone to cloud endpoints, a vLLM GPU and a llama.cpp laptop.

• **Catan Arena, agent evaluation testbed (2026)**: A learning agent graduates only when its win rate's 95% Wilson interval clears the 25% null.

• **Zzz, iOS app (2026)**: Gamified goal tracker released on the App Store, built solo in SwiftUI with Supabase.

## Honors

Three HPE hackathon wins (2024, 2026); two projects selected for HPE Fellow Review and BU-wide implementation • HPE Early Career Technologist (2024) • Patent application in progress (2026)

## Education and Publications

**M.S. Computer Science**, Arizona State University, Tempe — Aug 2021 – May 2023

**B.Tech Computer Science and Engineering**, PES University, Bengaluru — Aug 2017 – Jul 2021

**Publications:** ViStA (IEEE ISPASS 2021); true random numbers from portable-computer entropy (IEEE CONECCT 2021); PipeGAN (Springer LNNS 171, 2021).
